Water cycle mobile (pdf)

Stage 1

1a. Evaporation

1b. Transpiration

1c. Sublimation

Stage 4:  
Collection

Stage 2:  
Condensation

Stage 3:  
Precipitation

## Water cycle concepts

Concept	Meaning
Evaporation 90%	The sun heats up the water surface of oceans, seas, lakes, etc, and water changes from liquid to gas in the form of vapor.
Transpiration 10%	Transpiration is evaporation of water from plant leaves.
Sublimation	Sublimation is a process by which water changes from a solid to a gas.
Condensation	Water is held or stored in earth's atmosphere in the form of clouds.
Precipitation	Precipitation is water released from clouds in the form of rain, sleet, snow and hail.
Collection	Water is collected or stored in the oceans, rivers, lakes, and ponds. It is also stored underground and in reservoirs.
