

PANGOLINS need our love

Pangolins are mammals.
They eat ants and
termites.

Pangolins are sometimes
called *scaly anteaters*.

There are 8 species of
pangolins: 4 in Africa
and 4 in Asia.

Pangolin scales are a defense
against predators.

Many pangolin species are
endangered. Pangolins
are killed for their scales
and meat.

We can help by telling
others how cool pangolins
are and that they are in
danger from poaching.
